## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-3, 7-12 and 16-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yang et al.

With respect to claim 1, Yang figure 5 shows a bistable device comprising layers 94 and 100, which are each organic dielectric materials (page 5, [0063], and page 4, [0048]). These layers are separated from one another by conductive layer 96, 98. Two such dissimilar materials would inherently possess different conductivities. Alternatively, it would have been obvious to make the layers of low and high conductivities, because this is taught at page 3, [0035] as imparting the desired bistable characteristics. With respect to claim 10, orthogonal electrodes would have been obvious in order to form an array, as in a memory device. With respect to claims 17-18, it would have been obvious to limit current flow, using for example a resistor or resistive layer, in order to keep the device current low enough so that it doesn't melt. Other limitations not specifically discussed above are clearly taught in the reference.

***Allowable Subject Matter***

Claims 4-6 and 13-15 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
